The PDF'd permit that I have is only 18 pages, although the cover page of the permit says that there should be 33 pages. Does anyone here have the complete 33 page permit? If all we have is the 18 page permit, then it is likely that the absence of the standard conditions is because OEPA accidentally sent us only the first 18 pages. Before we object due to a failure to include various standard conditions, we should confirm with OEPA that they sent us the entire permit and, if they accidentally omitted pages, I think we need to get them to send us the entire permit, and check that complete permit to see whether or not the standard conditions are included.

Gary,

Kevin just asked me if the permit contains the standard conditions, which would include the reference to narratives.

It does not.

This would be an issue to add to this list of objections.

I just asked Krista to send me an example of OH permit that contains std conditions.

All,

Attached is the final version of the briefing, if you find any errors, please let me know asap.

I added one new sentence to page 2, paragraph 2, "Discharge Monitoring Reports also indicate that flow from these ponds occurs predominantly when there is no precipitation." Thanks to Krista's analysis of the AEC 308 data. And inserted to shed light on/counter the main argument OEPA makes in their cover letter with the proposed permit is that discharges are only precipitation driven.

Gary,

We haven't seen your draft general objection letter that is noted in the briefing paper will be attached to the paper.

thanks
